MTV1500

MTV1500 is a pneumatic tool developing moderate torque values but a very high rpm ratio, that is absolutely important to reduce working time. To optimize speed and for practical convenience we suggest to use our studrunner sockets exclusively together with our pneumatic studrunner. High speed, light weight, lowered vibrations, make it the perfect tool for hard duty applications.

MTV1500 is always supplied together with its special reaction support, designed to stabilize the tool during the use.
